

About us:

Founded in 2015, Somatix is a behavioral modification B2B2C software platform. We analyze in real-time data received from standard wearables for detecting hand gestures. Then we fuse together additional data sources and search for insights, in order to apply immediate interventions for preventative and rehabilitative healthcare, and wellbeing enhancement.

We aim our efforts towards addictions-control, elderly-care and monitoring of some neurologic diseases. Our customers are corporate employers, health insurance companies and clinics. Somatix provides an enterprise dashboard which allows remote monitoring of the person's compliance and adherence with the cessation plan, in order for the clinician or the coach to obtain higher efficacy of the treatment versus traditional methods of prescription and random periodical assessment.

The Opportunity:

Somatix is looking for an experienced **IOS Developer**, to join our team and take part in building the Somatix BMD ("Body Motion Data") platform.

This position will be responsible for:

- Designing and building advanced applications for the IOS platform including communication with IOT devices
- This is a key role in a rapidly growing R&D team, and as such you'll have the ability to see the direct impact of your contributions
- Collaborating with cross-functional teams to define, design, and ship new features.
- Unit-testing code for robustness, including edge cases, usability, and general reliability.

Requirements:

- BSc in computer science or equivalent or equivalent military background
- Experience with Objective-C and Swift
- Knowledge of multi-threaded, asynchronous code
- Experience with BLE - nice to have
- Ability to write clean, well factored UI code
- Passion for quality and attention to detail
- Strong understanding of object-oriented design, data structures, systems and applications
