

**Founded in 2015, Somatix® is a leading provider of a real-time wearable-assisted gesture detection RPM (Remote Patient Monitoring) platform, for cost-effective healthcare and wellbeing enhancement.**

The Somatix platform is the first of its kind capable of utilizing sensors built into smartwatches and smartbands for completely passive detection of physical and emotional indicators – no camera or sensor deployment in user environments or manual data logging required. The platform employs cloud-based machine learning and advanced analytics to enable real-time alerting and delivery of personalized reminders and notifications on detection of undesired symptoms. Somatix ultimately contributes to increased ADL (Activities of Daily Living) monitoring efficacy, enhanced medication and treatment adherence, and significantly improve people’s lives.

### **The Opportunity:**

Somatix is looking for a **"hands-on" QA** to join our team and be responsible for the following:

- Oversee and lead the company QA activities with specific attention to delivering the highest product quality
- Implement QA methodologies and best practices
- Perform "hands-on" manual testing
- Define and execute high-quality testing plans for all Somatix products

### **Requirements:**

- 2-3 years of Quality Assurance experience
- Project management and multi-tasking skills
- Experience with databases (e.g. MySQL)
- Experience with project management tools such as Jira
- Strong verbal and written communication skills
- A team player with a “can-do” attitude

### **Advantages:**

- BSC in computer science or equivalent
- Programming or scripting knowledge
- Technical knowledge including mobile, HTTP and backend
